

G Series
The all new classic from Scott.

G Series

Not just a reintroduction – a reinvention

Iconic and revolutionary, Scott G rods were first introduced in 1976. And with G, we truly changed fly fishing – by designing the first 9' 4-weight rod (seriously, the very first 9' 4 weight). And if that wasn't big enough, we also pioneered the graphite hollow internal ferrule – the most sophisticated and seamless way to connect multi-piece fly rods smoothly.

Those innovations are a couple of serious 'firsts' in the fly fishing world, and are a big part of why Scott G rods are among the most beloved medium-action, smooth-flexing fly rods.

But it didn't stop there... Scott was born with the determination to progress, and by building on the legacy of the Original G, we launched the G2 in 2006, and modernized medium-action fly rods by making them lighter and more responsive.

Now, with that same conviction, we introduce the next evolution in the G heritage... the all new G Series. We've elevated medium-action fly rods to new heights by creating rods that load deeply into their lower sections yet recover quickly and are directionally stable in all casting planes.

We solved this design conundrum, in part, with two innovations. First, we reinvented the hollow internal ferrule to make it more flexible, stronger, and more than 20% lighter. And second, we engineered the most dynamic multi-modulus lay-ups we've ever created using our advanced resin and fiber composites. The results are rods that have great stability and tracking, and generate faster line speeds. This improves accuracy and turnover even in windy conditions. And even with those big performance improvements, G Series rods retain that smooth, full-flexing action.

We fit G Series rods with the most innovative and functional components like titanium stripping guides, Universal snake guides, and new micarta reel seat spacers. Along with that leading edge technology, we celebrate some of the classic visual cues from their heritage in features like the thread wraps and epoxy finished cork at the top of the grips.

Like every Scott rod, G Series rods are handcrafted one at a time, in our shop by anglers who take pride in each and every rod they build.

With over 40 years experience designing and crafting high performance medium- action fly rods, we've set yet another standard - the first rods to deliver full flex and flat loops.

The all new G Series is like no other, and it's better than ever.

G Series Tech Scott G Series fly rods feature breakthrough technology seamlessly integrated

ReAct

ReAct technology combines our X-Core design with a new complex material and taper system to create a breakthrough in rod design.

Distance, control and accuracy are compromised by waves that vibrate in the rod, even after the cast has been made. Simply making the rod stiffer to stop these vibrations kills feel. ReAct counteracts energy sapping vibrations by speeding the recovery of the blank without the need to stiffen the rod with more material.

EXCESS VIBRATIONS COMPROMISE FEEL AND CONTROL BY SAPPING ENERGY FROM YOUR CAST

REACT SIGNIFICANTLY INCREASES RECOVERY SPEED TO MINIMIZE VIBRATIONS AND MAXIMIZE FEEL AND EFFICIENCY

MULTI-MODULUS

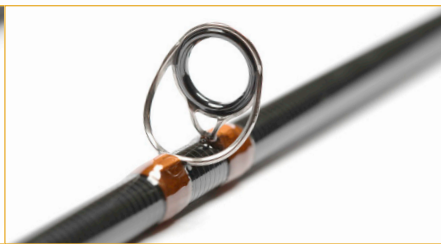

Scott pioneered multi-modulus lay-ups in blank design. We're able to precisely control stiffness along the length of the rod to build rods that load and unload more smoothly.

NATURAL FINISH

Creating a natural finish blank requires exacting tolerances, more care, and shows off the beauty of graphite. The Scott natural finish is all about making your rod lighter, more durable and better performing.

tion.

egrated with the finest components and workmanship. All this to make sure your fishing is better.

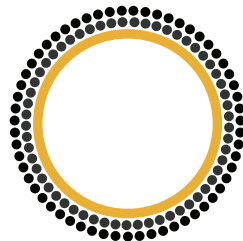

ARC

Advanced Reinforced Carbon for reducing torque and increasing strength.

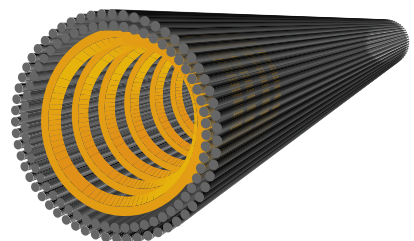

Scott is the leader in carbon blank reinforcements. Our latest ARC technology adds hoop strength to our blanks without adding weight, and counteracts torque that can reduce casting accuracy and line control.

ARC helps us create low-mass thin-walled blank designs by providing the most advanced reinforcement.

And that's just good ol' science meets engineering meets design.

AN INNER CORE OF REINFORCING ARC TECHNOLOGY

STRONG, LOW-MASS WALLS ARE MADE POSSIBLE USING ARC TECHNOLOGY

X-CORE

X-Core delivers blanks that transmit feel and maintain stability better than any other design approach. We use fast taper mandrels with low-mass thin-walled blanks to create rods that have feel, stability and sensitivity.

MADE IN USA

Every single Scott rod has been handcrafted in the USA... beginning to end. That's very important to us. We like to get our hands dirty, and we can control exactly how your rod is built and who builds it. That commitment continues today, in the heart of Trout Country, Colorado by anglers who understand fly rods. Isn't it better to know who built your rod?

G Series

Action Profiles

Under normal load the rod flexes in the middle of the rod

A faster return from a flexed or loaded state

Our reinvented hollow internal ferrule is now even stronger, more flexible, and over 20% lighter
